

GastrakSM service levels comparison table

	Lite (Via Resource Kit)	Select (Via Air Products' Application Specialist)	Plus (Via Air Products' Application Specialist)
Recommending the best weld process gas	●	●	●
Identifying leaks		●	●
Visual equipment inspection report	●	●	●
Conducting gas efficiency survey using calibrated and traceable equipment		●	●
Manual flow tube provided	●		
Estimating gas saving	●	●	●
Recommending optimum flows	●	●	●
Supplying, fitting and setting up the economiser units	Instructions in resource kit	●	●
Eliminating pre-weld surge	●	●	●
Setting optimum flows	●	●	●
Locking the units* to guarantee savings	●	●	●
Gas flow report	Free lifetime access	Air Products' expert	Air Products' expert
Reporting on the equipment used at different stations		●	●
Follow-up visits to ensure optimised flows continue to be realised		1 per year	Up to 2 per year
Number of units	1-8 Integra [®] cylinders / 1-3 regulators*	9-15 Integra [®] cylinders / 4-15 regulators / 1-15 drop points	16+ any units

*Classic version only

Reduce weld process gas consumption and improve weld quality

Many welders believe that a higher weld process gas flow rate gives a better weld. This is not true. There is an optimum flow rate for each application and our Gastrak® economisers ensure this optimum flow rate is constantly achieved.

A cost-saving solution for all supply modes

Air Products' GastrakSM service reduces gas consumption and improves weld quality. Available in 3 distinct service levels; Lite, Select and Plus:

- **Lite** – a self-service kit containing everything required to ensure optimised flows and savings; ideal for smaller users
- **Select** and **Plus** – on-site consultation, set-up and equipment for medium and larger users' to 'our on-site service including consultation, equipment selection and set-up.

For 'Select' and 'Plus' customers, an Air Products' expert will visit your site to:

- Check equipment for gas leaks
- Recommend the best weld process gases for your applications
- Suggest optimum weld parameters including gas flow rates
- Supply and install the appropriate Gastrak® economisers

We go the extra mile to ensure significant gas savings and improved weld quality are maintained with follow-up visits from our expert team.

Reduce costs

- By eliminating pre-weld surge and ensuring the optimum flow rate is used, the Gastrak® economiser will reduce your weld process gas consumption by up to 65%.

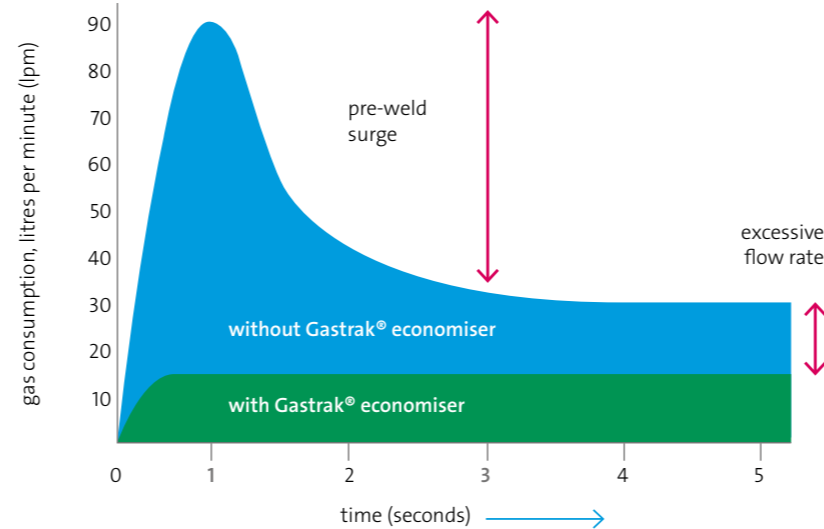

Improve quality

- The Gastrak® economiser guarantees consistent use of the optimum gas flowrate for the job. This improves weld quality and reduces rejects.

Easy installation

- Gastrak® economisers can be integrated into an existing or new weld process gas pipeline, or can be used with traditional or Integra® cylinders.

Gas saving with Gastrak® economiser

Gas savings as high as **65%**
